

## Fire Alarm Call Point Covers

This highly effective, best-selling Call Point Cover has been developed to prevent both malicious and accidental false fire alarms, without inhibiting the legitimate use of the call point itself.

Importantly, the clear, tamper-proof and robust polycarbonate device offers a highly visible barrier against fire alarms being maliciously raised. These call point covers also prevent passers-by from accidentally knocking or accidentally leaning against the call point. This call point cover requires little DIY experience to fit. It is easily retro-fitted over previously installed call points using the screws and rawl plugs it is supplied with. Once in place, to operate the call point, simply lift the lid. For an additional deterrent, SSP also offers an alarmed version of the same product.

### Variants

SSP's fire alarm call point covers can also be purchased with:

**Alarm:** 96 dB alarm sounds when cover is opened

**Break Seal:** Tamper evident seal shows when the cover has been opened

**Frangible Lock:** Breakable lock. Requires a large amount of force to break and open the cover

### Alternative Colours

Also available in Green, Blue and Yellow

### Message

All emergency door release button covers are supplied with the message '**In case of fire lift cover break glass**'

If you want a different message, we can do this for a small cost.

### Dimensions (Surface Mount)

**Internal Width** 105mm

**Internal Height** 140mm **External Height** 156mm

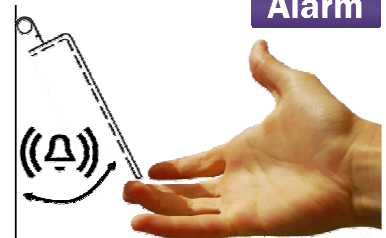

**Internal Depth** 48mm **External Depth** 57mm

### Spacers

The surface mount variant of these products are available with a 30mm or a 50mm spacer at the rear. This increases the above depth dimensions and can help you accommodate trunking or wiring in the back of the unit.
